Depot station lift-server for the filling of containers

The inexpensive alternative to conventional depot stations

- simple operation with programmed motion sequences
- exact quantity filling through pulse counting
- the integrated, fast moving lifting unit means no interruption time
- maximum operational safety
- high storage capacity for overnight and weekend production
- fast change of container while filling
- type, size and number of containers determined by the operator
- gentle filling of parts through reduced drop heights
- ideal for part storage with handling devices

Thinking for the future

Quality products, innovative reactions, highest quality – that is where **M**Fördersysteme stands for. Together with our distribution partners, we are your partner around conveyor systems. Challenge us and discover the benefits of conveyor systems exactly tailored to your specific needs. We will guide you along the way from planning to deployment of new systems.
